Art Unit: 1761

This application contains claims directed to the following patentably distinct species:

There are two species of treating steps, and the product treated by the respective steps, as follows:

Species Ia, wherein the treating step is a coating on the surface of the vegetable and the vegetable is coated;

Species Ib, wherein the treating step is infusing of the vegetable and the vegetable is infused;

There are two species of dehydrating steps as follows:

Species IIa, wherein dehydrating occurs after the treating step;

Species IIb, wherein dehydrating occurs before the treating step;

Finally, there are a number of species of stabilizer and applicants are required to elect one of the disparate species of stabilizer.

Therefore, in summary, applicants are required to elect, under 35 U.S.C. 121, one of Species I, and one of Species II and one of the stabilizers. Currently, no claim appears to be generic to all of the species.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Art Unit: 1761

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.
